DCI PLUS ARCHITECTS

BUSINESS DEVELOPMENT STRATEGY & EXECUTION PLAN

90-Day Action Plan & 12-Month Growth Roadmap

PREPARED BY

Rohanda Nasr

PROPOSED POSITION

Business Development Manager

DATE

November 2026

CONFIDENTIAL — BUSINESS DEVELOPMENT PROPOSAL

01 | Executive Summary & Growth Vision

THE OBJECTIVE

My proposed approach is to strengthen DCI PLUS's commercial position through a proactive, structured business development function that identifies suitable projects, reaches decision-makers early, develops client relationships and converts opportunities into commercially viable consultancy assignments.

In a relationship-driven architectural consultancy market, business development begins before the formal RFP. It requires understanding where projects are emerging, who controls consultant appointments, what each developer needs and how DCI PLUS can demonstrate a relevant multidisciplinary value proposition.

Five Strategic Priorities

Priority	Commercial Focus
Existing relationships	Reactivate previous clients, identify additional phases, repeat assignments and expanded scopes.
Market presence	Deepen established markets; assess Saudi Arabia and Oman selectively and on commercial merit.
Acquisition channels	Develop direct developer, institutional, referral, partnership and consultancy channels.
Conversion discipline	Qualify opportunities; manage discovery, proposals, negotiations, award and handover.
Measurable results	Link daily activity to qualified pipeline, consultancy fees, contract awards and revenue.

Definition of Success

Success is not measured only by contacts or meetings, but by the relevance of opportunities and their movement toward profitable contracts. The intended outcomes are stronger executive relationships, earlier project involvement, improved consultant-selection positioning, more relevant proposals, repeat business, selective regional growth and better revenue visibility.

First 90 Days

Assessment and execution will run in parallel. Immediate opportunities and client follow-ups start during the first month; by day 90 the aim is a prioritized account base, active stakeholder engagement, a qualified opportunity pipeline, clear reporting and the next 12-month roadmap. Initial targets remain subject to management validation.

02 | Company Positioning & Internal Assessment

According to its published profile, DCI PLUS was established in 2003 by Architect Waleed Morsy. Its principal services are Architecture Design; Urban Design and Planning; Landscape Design; and Interior Design. Its project portfolio spans residential communities, hospitality, mixed use, corporate and office, public/institutional and educational developments, including regional experience in Saudi Arabia.

Commercial Positioning

I would position DCI PLUS as a multidisciplinary design consultancy that connects design quality to development objectives: project identity, efficient planning, functionality, discipline coordination, landscape and public realm, interior experience, buildability and delivery considerations. Client conversations should address the complete development requirement rather than only an isolated drawing package.

Client Segment	Relevant Proposition
Residential / master developers	Community planning, architecture and landscape; integrated spatial developments.
Hospitality developers	Architecture, interior design, landscape and guest-experience integration.
Commercial developers	Commercial and mixed-use design combining urban, architectural and interior scope.
Corporate clients	Office and administrative environments through architecture and interiors.
Institutional clients	Public and specialized facilities through architecture, planning and landscape.

First-Month Commercial Review

With management and technical teams, review completed/current projects, credentials, previous and active clients, the existing pipeline, past proposals, lead-conversion practices, marketing materials, service economics, technical workload and international references.

Outputs: a company and service assessment; the strongest portfolio references; a client reactivation list; an initial pipeline review; identified commercial bottlenecks; and priorities grounded in actual capacity and management objectives.

03 | Market Intelligence & Opportunity Discovery

Market intelligence must lead to business development actions, not just research reports. The proposed process continuously monitors relevant projects, identifies developers and decision-makers, benchmarks competitors, qualifies opportunities and records the next commercial action.

Development Monitoring

- Land announcements, real estate acquisitions and new residential or mixed-use developments.
- Hotel and tourism plans; commercial and administrative projects; institutional/urban initiatives.
- Later phases of existing developments and opportunities for design upgrades or added scopes.

Research Sources

Use official developer and government announcements, investment portals, market reports, construction/project intelligence platforms, tender sites, LinkedIn executive updates, conferences and professional networks. Check project information against credible sources wherever possible.

Competitor Benchmarking

Review local and international architectural and multidisciplinary firms by service mix, portfolio, sector specialization, geographical footprint, client relationships, qualifications and local partners, competitive strengths and proposal quality. The findings should show where DCI PLUS can differentiate itself and where collaboration with larger consultants is commercially preferable to direct competition.

From Information to Action

Each relevant project should be registered with its developer, location, sector, maturity, likely DCI PLUS scope, known procurement path, available stakeholders and recommended next action. Accounts and opportunities should be re-prioritized as new information emerges; early access before consultant selection is particularly valuable.

04 | Opportunity Qualification & Tracking

Not every announced development is a viable pursuit. Assessment must balance strategic fit, project funding and maturity, potential consultancy fees, decision-maker access, procurement requirements, competition, delivery capacity, payment conditions and contractual exposure.

Proposed Weighted Qualification Scorecard

Qualification Criterion	Weight
Strategic fit with DCI PLUS	20%
Decision-maker accessibility	15%
Project maturity and timing	15%
Technical and delivery fit	15%
Consultancy fee potential	15%
Competitive positioning	10%
Commercial and payment risk	10%
TOTAL	100%

An indicative score of 70% or higher would trigger priority consideration, subject to management review and critical-risk checks. The threshold does not override concerns about payment, contractual risk or resources; lower-scoring projects may still merit pursuit for a clear strategic reason. Criteria should be calibrated against historical wins and losses.

Minimum Opportunity Database Fields

Target company; project and location; development sector and status; potential DCI PLUS scope; supportable consultancy fee range; decision-makers; existing consultants/competitors if known; procurement route; qualification status; expected timing; and recommended next action.

The database must distinguish projects under research from qualified and active opportunities to avoid overstating the pipeline. Every qualified opportunity should have a named owner, current stage and follow-up date.

05 | Regional Market Selection & Saudi Arabia

Regional expansion will be opportunity-driven. Evaluate development activity, sector fit, accessibility of clients, competition, registration/licensing requirements, suitable partners, potential fees and margins, payment risk and technical delivery feasibility. Classify markets as established, adjacent growth or exploratory based on evidence, rather than geography alone.

Saudi Arabia — Commercial Rationale

Knight Frank's Saudi Arabia Construction Landscape Review (5 October 2026) reported approximately USD 2.07 trillion in planned and ongoing projects in H1 2026, including around USD 1.13 trillion in construction and real estate. Riyadh accounted for approximately 46% of construction, industrial and transport contract awards from 2020 to August 2026. These headline values do not represent accessible DCI PLUS fees. Rising costs, supply-chain pressures and delivery risks reinforce the need for selective pursuit.

Geographical & Sector Focus

Geography	Initial Focus
Riyadh	Residential communities, master planning, commercial, mixed-use and institutional projects.
Jeddah	Hospitality, residential, commercial and mixed-use developments.
Eastern Province	Residential, corporate, commercial and institutional work; relevance of existing regional references.

Priority Client Segments

Master developers; private developers; investment/development companies; hospitality and tourism developers; government-backed entities; and established engineering and architectural consultancies.

The objective is not to maximize the account list, but to identify funded and sufficiently mature developments with realistic procurement access, appropriate scopes and credible commercial conditions.

06 | Saudi Arabia — Target Accounts & Execution

Initial Account Research Universe

ROSHN Group; Diriyah Company; Red Sea Global; New Murabba Development Company; National Housing Company; Jabal Omar Development Company; and selected private developers in Riyadh, Jeddah and the Eastern Province.

These are prospective research targets, not confirmed tenders, procurement opportunities or established DCI PLUS client relationships.

Five-Step Commercial Execution

Step	Action / Output
1. Account research	Map portfolio, announced projects, development stage, likely design requirements, incumbent consultants and procurement information.
2. Decision-maker access	Identify CEOs/MDs, Chief Development Officers, Development Directors, Project/Technical Directors and procurement teams.
3. Commercial positioning	Prepare tailored presentations and sector-specific DCI PLUS project references; demonstrate the relevant multidisciplinary proposition.
4. Opportunity development	Arrange discovery meetings, understand upcoming packages, qualify opportunities and agree specific next actions with technical teams.
5. Market access	Confirm applicable engineering licensing, consultancy registration, procurement and prequalification rules before any formal pursuit.

Routes to Market

Depending on project-specific eligibility and commercial feasibility: direct consultancy appointments, collaboration with qualified local firms, joint pursuit arrangements or subconsultancy assignments. The contracting route must be checked against applicable regulations and technical responsibilities.

Expected Outcome

A defensible prioritized account list, relevant executive/partner relationships and qualified commercial opportunities measured by progression, not simply by outreach volume.

07 | Oman & Broader Regional Expansion

Oman — Market Rationale & Focus

Oman offers potential opportunities in integrated residential communities, urban development and regeneration, tourism, hospitality, mixed-use, commercial and institutional assets, and public-realm/landscape projects. Sultan Haitham City in Muscat is a relevant reference: official information indicates approximately 14.8 sq km and a published USD 5.2 billion development value with residential, commercial, educational, healthcare and hospitality components.

Initial Research Accounts

OMRAN Group; Al Mouj; Muriya; Talaat Moustafa Group's Oman developments; Al Ahly Sabbour's Oman developments; selected private developers; and organizations involved in Sultan Haitham City or comparable urban development initiatives. Each requires validation of activity, accessibility and procurement timing.

Proposed Commercial Process

- Identify active developers and project phases; monitor relevant pipeline and consultant requirements.
- Map decision-makers, establish professional introductions, and assess qualified local design/engineering partners.
- Check registration, tender, licensing and procurement requirements before proposing a contracting model.
- Pursue appropriately qualified packages through direct assignments, local collaboration, joint bidding or subconsultancy.

Regulatory Considerations

Review applicable official Omani services for engineering consultancy licensing and registration, including the relevant classification framework under Decision 104/2022. Project procurement terms and current law must determine the final model.

Other Markets

Saudi Arabia and Oman should not exclude other attractive markets. Expansion into additional territories should depend on existing DCI PLUS references, client/referral channels, project activity, competition, entry requirements, partners and expected return relative to resources invested.

08 | Target Client Segmentation & Account Strategy

I propose account-based business development that prioritizes organizations with meaningful development pipelines. Each account should include a profile, relevant projects, decision-maker map, specific DCI PLUS value proposition, engagement approach and next action.

Three-Tier Client Model

Tier	Target Profile	Engagement Approach
Tier 1 — Strategic	Major developers, master developers, investment groups and institutions with repeat potential.	Senior-level introductions, tailored presentations and long-term account plans.
Tier 2 — Growth	Established developers with identifiable projects and accessible decision-makers.	Project-specific outreach, discovery discussions and relevant references.
Tier 3 — Opportunity	Smaller or specialist clients offering suitable individual assignments.	Selective pursuit based on fit, fee potential and delivery resources.

Decision-Maker Map

Stakeholder	Typical Influence
CEO / Managing Director	Senior-level approval and corporate direction.
Chief Development Officer	Development strategy and consultant selection.
Development / Project Director	Project pipeline, planning and delivery coordination.
Technical Director	Technical assessment and required design scope.
Procurement Director	Registration, tendering and selection procedure.
Investment Director	Feasibility and financial priorities.

Distinguish the economic buyer, project sponsor, technical evaluator and procurement gatekeeper. Relationship coverage across these roles is more valuable than access to a single contact.

09 | C-Level Access & Personalized Engagement

Five Access Channels

Channel	Practical Use
Existing relationships and referrals	Identify credible introductions through past/current DCI PLUS clients and professional networks.
LinkedIn and direct research	Locate executives, understand their role and personalize engagement around verified activities.
Project-based outreach	Approach decision-makers about a specific development rather than a generic company profile.
Industry events	Select events against predefined target accounts, introductions and meeting objectives.
Strategic partner introductions	Use relationships with consultants, project managers and real estate advisors to access relevant clients.

Illustrative Outreach

“Having reviewed your development portfolio and current project activities, I believe there may be opportunities where DCI PLUS’s multidisciplinary design capabilities could support your upcoming developments. With experience across architecture, urban planning, landscape and interior design, we would welcome the opportunity to learn more about your development pipeline and explore areas where our services may be relevant.”

This is an example only; messages must be customized to the account and should never be distributed as a generic mass email.

Meeting Preparation & Discovery

Prepare company/executive background, relevant developments, likely design requirements, two or three comparable DCI PLUS references, a tailored presentation and a defined next step. Ask about the client’s 12-month development priorities, projects entering design, outsourced scopes, consultant selection process, evaluation criteria and prospects for repeat engagement.

After the meeting, document the requirements, decision-making process, opportunity status and agreed follow-up in the CRM.

10 | Business Development Sales Cycle

A structured opportunity-to-contract sequence will support consistent progress from early market identification to contract handover and repeat business. Each stage should have a clear output, owner and next action.

Stage	Key Action	Required Output
01 Market Mapping	Identify companies, projects and relevant partners.	Target account / project database
02 Lead Generation	Contact stakeholders via referrals, research and outreach.	Engaged prospects
03 Qualification	Check timing, scope, budget, access and technical fit.	Qualified opportunities
04 Client Discovery	Understand objectives, requirements and buying process.	Client needs / opportunity brief
05 Opportunity Development	Develop scope, service proposition and pursuit strategy.	Defined consultancy proposition
06 Prequalification / RFP	Coordinate registration and compliant submissions.	Complete prequalification / RFP
07 Proposal & Negotiation	Develop proposals, clarify scope and negotiate terms.	Commercially negotiated opportunity
08 Award & Handover	Finalize terms and transition information to delivery teams.	Signed contract / internal handover
09 Account Development	Maintain relationships, identify new phases and added services.	Repeat-business opportunities

Operating Discipline

The process should begin before formal tenders whenever possible. Opportunities move forward based on evidence, relevance and commercial viability—not merely on completing outreach or submitting a proposal.

11 | CRM, Bid Decisions & Proposal Management

CRM Opportunity Record

Maintain client/project, sector/market, project maturity and timeline, potential DCI PLUS scope, estimated consultancy fee, key stakeholders, opportunity stage, incumbent consultant/competitors if known, win probability, expected award date, responsible owner, next action, and commercial/delivery risks. Record follow-up dates and client communications consistently.

Bid / No-Bid Controls

Before allocating technical resources to a formal pursuit, assess strategic and technical fit, relevant credentials, client credibility, realistic winning prospects, available delivery resources, acceptable consultancy fees, manageable payment/contract terms and any wider strategic value. Avoid pursuing nominally large projects with weak margins or unacceptable exposure.

Six-Step Proposal Process

Step	Practical Control
01 RFP review	Extract scope, deliverables, eligibility, deadlines, evaluation and contractual requirements.
02 Internal coordination	Confirm approach, deliverables, resourcing, programme and relevant references with technical teams.
03 Technical proposal	Document understanding, methodology, project team, programme and required outputs.
04 Commercial proposal	Coordinate pricing and assumptions with management, technical and finance personnel.
05 Quality check	Verify completeness, compliance, consistency and presentation standards.
06 Follow-up	Submit on time, track clarifications, evaluation status and client responses.

Commercial Negotiation

Negotiations should cover scope, exclusions, design stages and revisions, programme, payments, additional services, liability, contractual terms and resource commitments—not simply fee reduction. The objective is a viable assignment that supports both profitability and delivery quality.

12 | Strategic Partnership Development

Partnerships should deliver identifiable commercial benefits through client introductions, earlier project access, complementary services, market eligibility or delivery capability. The value of an MOU is not sufficient proof of success.

Partner Category	Potential Commercial Contribution
Local architecture / engineering firms	Joint pursuits, local registration, subconsultancy, complementary disciplines and technical capacity.
International design / engineering firms	Regional design packages, specialist support, multidisciplinary teams and selected joint bids.
Real estate / development advisors	Developer introductions, investment contacts, early-stage planning and opportunity intelligence.
Project management / construction firms	Consultant team formation, design coordination and project-specific design packages.

Partnership Development Sequence

- Identify candidates and review portfolios, client relationships and market presence.
- Assess technical and commercial complementarity and identify mutual opportunities.
- Arrange introductory/technical meetings and agree on the appropriate collaboration model.
- Clarify responsibilities, confidentiality and commercial terms before developing a joint pipeline.
- Review performance through qualified referrals, joint opportunities, proposals, awards and fee contribution.

Performance Measures

Assess client access, quality of joint prospects, proposal participation, successful awards, professional-fee contribution, delivery experience and longer-term relationship potential. Invest more effort only where the partnership demonstrates tangible value.

13 | First 90 Days: Month 01 (Days 1–30)

PHASE 1 — BUSINESS DIAGNOSTIC & COMMERCIAL FOUNDATION

Objective: understand DCI PLUS's current position, identify immediate opportunities and build a practical commercial foundation. Client follow-ups and relevant outreach should begin while internal analysis takes place.

Week	Principal Activities	Key Deliverables
W01 — Internal Understanding	Meet management/technical leads; review services, projects, capacity, priorities and credentials.	Company/service assessment; portfolio review; stakeholder map; immediate follow-ups.
W02 — Client & Pipeline	Review current/past clients, pending proposals, lead process and available performance records.	Client opportunity map; preliminary pipeline; reactivation list; process review.
W03 — Market & Competitors	Research Saudi Arabia/Oman, priority sectors, competitor positioning and prospective partners.	Market intelligence; competitor benchmark; market priorities; partnership shortlist.
W04 — Strategy Activation	Segment accounts, identify decision-makers, tailor credentials, begin targeted outreach and follow-ups.	Target account database; priority list; engagement plan; outreach report; refined execution priorities.

Month 01 Success Indicators

- Initial business and client assessment completed; key commercial strengths and gaps identified.
- Priority accounts selected; commercial materials assessed; initial outreach activated.
- Central opportunity tracking established with owners and follow-up actions.

Expected milestone: Commercial Foundation Established.

14 | First 90 Days: Month 02 (Days 31–60)

PHASE 2 — MARKET ACTIVATION & CLIENT ACQUISITION

Objective: translate research and account mapping into active executive relationships, qualified opportunities and relevant procurement or partnership discussions.

Week	Principal Activities	Key Deliverables
W05 — Account Activation	Engage Tier 1/2 accounts and senior decision-makers; activate referrals; prepare presentations and schedule meetings.	Active account pipeline; outreach tracker; meeting schedule; tailored materials.
W06 — Client Engagement	Conduct discovery; understand project pipelines, appointment process and potential DCI PLUS requirements.	Meeting reports; qualified leads; qualification assessments; updated pipeline.
W07 — Partnerships	Approach selected local/international firms; assess joint bids, subconsultancy and complementary expertise.	Partnership shortlist; meeting reports; joint opportunity register; models.
W08 — Opportunity Development	Advance opportunities with technical teams; define propositions; pursue prequalification and suitable proposals.	Qualified pipeline; prequalification submissions; initial proposals; engagement plans.

Month 02 Success Indicators

- Selected accounts actively engaged and qualified discovery meetings held.
- New commercial opportunities recorded with specific next actions.
- Strategic partnership discussions initiated and relevant proposal/prequalification processes activated.

Expected milestone: Qualified Pipeline Developed.

15 | First 90 Days: Month 03 (Days 61–90)

PHASE 3 — OPPORTUNITY CONVERSION & COMMERCIAL OPTIMIZATION

Objective: progress qualified opportunities toward proposals, negotiation and possible awards; evaluate pipeline quality and establish the next-stage growth priorities.

Week	Principal Activities	Key Deliverables
W09 — Commercial Advancement	Follow up active opportunities, clarify requirements, coordinate technical input and broaden relevant service scopes.	Advanced opportunity register; updated propositions; proposal tracker.
W10 — Proposals & Negotiations	Manage submissions/clarifications, support fee discussions and monitor client evaluation.	Proposal status report; negotiation tracker; weighted pipeline.
W11 — Pipeline Optimization	Review stalled/lost pursuits, engagement efficiency, priority accounts and unresolved commercial gaps.	Pipeline analysis; win/loss review; revised priorities; improvement actions.
W12 — Management Review	Consolidate 90-day activity; review client/partner results, KPIs, resources and forward plan.	90-day report; commercial pipeline forecast; partnership progress; 12-month roadmap.

Month 03 Success Indicators

- Qualified opportunities advanced through defined commercial stages.
- Pipeline and proposal outcomes reviewed, with stalled/lost reasons documented.
- Management receives an actionable forecast, performance report and 6–12-month priorities.

Expected milestone: Growth Roadmap Defined.

16 | Execution Targets & KPI Framework

The following 90-day figures are initial activity targets, not guaranteed contracts or revenue. They must be validated against DCI PLUS's existing clients, sales pipeline, technical capacity and market access.

Proposed 90-Day Indicator	Initial Target
Target accounts mapped	30–40
Priority accounts selected	15–20
Qualified C-Level meetings	10–12
Qualified business opportunities	5–8
Strategic partnership discussions	2–3
Relevant proposals / prequalification submissions	3–5

Five KPI Dimensions

Dimension	Selected Performance Measures
Market Development	Target/priority accounts, projects identified, markets assessed, sectors targeted.
Client Acquisition	Decision-makers contacted, qualified C-Level/discovery meetings, new and reactivated relationships.
Sales Pipeline	Qualified opportunities, fee value, weighted value, stage progression, development period and conversion.
Proposal Performance	Prequalifications, RFPs, submissions, win rate, preparation time and lost-bid reasons.
Commercial Results	Contracts secured, consultancy fees, new/existing revenue, repeat business, partnership-generated fees.

Use these indicators together: high outreach without qualified opportunities calls for improved targeting; a high-value but stagnant pipeline calls for stronger qualification and follow-up. Contract outcomes depend on client decisions, project timing and procurement conditions.

17 | Forecasting, Reporting & Commercial Control

Pipeline Valuation

Forecasting should use potential consultancy fees available to DCI PLUS—not the total value of the underlying construction project.

Weighted Pipeline Value = Estimated Consultancy Fee × Probability of Winning

Illustration: a USD 100,000 consultancy assignment with an estimated 40% win probability contributes USD 40,000 to the weighted pipeline. This is a planning estimate, not confirmed revenue. Probabilities should follow defined stages and be recalibrated against historical conversion performance.

Weekly Business Development Report

Summarize new leads, account outreach, meetings held, opportunities qualified/advanced/delayed, proposals being prepared or submitted, immediate follow-ups and any management/technical support required.

Monthly Management Review

Review pipeline size and quality, client acquisition, proposal activity and conversion, market development, partner contribution, commercial risks, revenue outlook and next-month priorities. Highlight decisions and changes rather than repeating static CRM entries.

Operating Rules

- Every qualified opportunity has one accountable owner, a current stage and documented next step.
- All active records maintain follow-up dates, relevant client communication, fee assumptions and commercial risks.
- Management should distinguish the unweighted pipeline, weighted pipeline, signed awards and recognized revenue.
- Reports should support strategic decisions, capacity allocation, accountability and corrective action.

Expected Operating Outcome

A transparent, repeatable opportunity-management discipline that links early market development to measurable consultancy business without creating unnecessary administration.

18 | 12-Month Roadmap, Governance & Closing

12-Month Growth Roadmap

Period	Focus	Expected Progress
Months 1–3	Establish & Activate	Diagnose current position, map accounts, engage executives, qualify opportunities, start partner discussions and reporting.
Months 4–6	Expand & Convert	Deepen priority accounts, progress prequalification and tailored proposals, improve follow-up and pursue possible awards.
Months 7–9	Consolidate & Scale	Develop repeat business, strengthen selected sectors/partners, review bid outcomes and improve forecasting.
Months 10–12	Optimize & Grow	Evaluate channels and commercial contribution, improve conversion, strengthen regional positioning and recommend next-year priorities.

Implementation Considerations

Align targeting and expansion with management priorities; coordinate opportunities with technical teams and available resources; keep client and project records current; identify assumptions; and adapt to changes in market conditions or procurement schedules. Annual evaluation should cover contracts, secured fees, new/repeat business, pipeline growth, proposal results, market entry, partnership contribution and retention. Final targets require baseline company data; target accounts and published market figures do not imply confirmed opportunities.

Conclusion

My objective is to build on DCI PLUS's established capabilities through earlier client engagement, focused account development, disciplined qualification, competitive proposals and consistent opportunity ownership. Success should be measured by qualified relationships and the sustainable commercial value secured, not activity volume alone.
